

DELIVERING BETTER.

For a company that specialises in keeping our city streets clean and embraces innovation, having some of the cleanest, most technically advanced trucks on the job is a perfect fit. Civic Contractors were so impressed with their first Canter Eco Hybrid, they added a second.

Owner-director Bjorn Revfeim sees the Canter Eco Hybrids as a neat fit with Civic's values to "embrace innovation" and "look after the environment" and an opportunity to reduce fuel and maintenance costs.

"They compare very favourably against our other trucks," says Bjorn. "We're happy with them both and so are our drivers."

The first 5,995kg GVM unit, fitted with a tipper, operates in South Auckland collecting and disposing of illegally dumped rubbish. The second unit has a larger 7,500kg GVM to

accommodate a waste compactor on the back, and is employed emptying public litter bins around the North Shore.

Driver Sonny Leasuasu now spends less time at the gas station and says the Hybrid handles so well "it's just like driving my family van". "It's great, whatever load is on board," says Sonny. "It's very comfortable and I like how quiet it is; it makes concentrating on driving easier – other vehicles, pedestrians and my own speed."
